Case study

Having been operating for 10 years in providing financial services, a leading specialist analysis firm in Australia is well-known for offering the best Financial Transaction Analysis Services, data mining and consulting services and software solutions.

Background

Having a market-leading methodology in Financial Transaction Analysis that combines sophisticated data mining techniques and auditing expertise in order to benefit customers' business, the solutions of the firm in study are now serving many global clients performing in: retail, financial services, manufacture, mining, telecommunications, energy, and government.

Challenges

The rebate and deal management is poorly controlled or left blur in many different ways and many retailers and distributors have up to 5% of their debate and deal revenue under-claimed or missed. Identification, monitor, and recovery of all the vague transactions require in-depth analysis and specialized expertise.

The huge application confronted with the system complexity (colossal enterprise architecture, a large number of components, third-party libraries and open source technologies) and business flows overlap takes much effort at the early stage of the project; while the giant amount of back-end data from database system and data warehouse is a crucial challenge in both analysis and development phase.

The challenges require precious experience on in software industry, outstanding highly technical skills, and proactive and tight collaboration between the development team and client side to help tackling the venture effectively and efficiently.

Solution

The Rebate and Deal Management Solution (Retailers) will help distributors and retailers to ensure the deals and rebates are fully implemented based on the initial agreement. This web-based solution provides the complete workflow for the rebate and deal life cycle in order to increase the rebate and deal revenue with the functionalities:

- Automated Claiming
- Online Access
- Business Reporting: Improve and design reporting-related functionalities for PFG files as output based on Jasper Report tool.
- Account payable and merchandise system integration
- Centralized repository
- Admin-related modules for effectively application 's resources administration by both Solution Provider and Retailer sides
- Secure 24/7 web based access

Ongoing process

Amendment, Support and Maintenance are critical for the whole system to run effectively and for future improvements. The project scope consists of:

- Making necessary changes to existing functionality to tailor them to the new requirements from the product manager
- Fixing bugs inherent from the current source build
- Contributing ideas to advance the existent business workflows under the product manager's approval

What Citigo offers

- Modern hardware and IT infrastructure
- Effective collaboration with Assemble – a web-based project management
- Full copyright reserve: Source Code Authorization, IP Protection, Confidentiality Non-Disclosure Agreement
- Frequent reporting
- Phone/Email/Live support
- Project manager's supervision and support
